L3S researchers win NSA Best Scientific Cybersecurity Paper Competition

In their paper, they investigate root causes for developers to unintentionally introduce insecure code into mobile applications, finding that the widespread practice of copying and pasting source code from the Internet causes many vulnerabilities.

The NSA annually honours one paper that “shows an outstanding contribution to cybersecurity science”. Dr. Fahl and his team will accept the award at the NSA headquarters in Washington DC on the 27th of October.

The NSA announcement can be found here: https://cps-vo.org/group/sos/papercompetition

The paper can be accessed here: http://ieeexplore.ieee.org/document/7546508/
