The vision of the LinkedUp Challenge is to realise personalised university degree-level education of global impact based on open Web data and information. Drawing on the diversity of Web information relevant to education, ranging from Open Educational Resources metadata to the vast body of knowledge offered by the Linked Data approach, this aim requires overcoming substantial challenges related to Web-scale data and information management involving Big Data, such as performance and scalability, interoperability, multilinguality and heterogeneity problems, to offer personalised and accessible education services. Therefore, the LinkedUp Challenge provides a focused scenario to derive challenging requirements, evaluation criteria, benchmarks and thresholds which are reflected in the LinkedUp evaluation framework. Information management solutions have to apply data and learning analytics methods to provide highly personalised and context-aware views on heterogeneous Web data.

Building on the strong alliance of institutions with expertise in areas such as open Web data management, data integration and Web-based education, key outcomes of LinkedUp include a general-purpose evaluation framework for Web-data driven applications, a set of quality-assured educational datasets, innovative applications of large-scale Web information management, community-building and clustering crossing public and private sectors and substantial technology transfer of highly innovative Web information management technologies.

Project abstract:

Nicht zuletzt die (Linked) Open Data Bewegung hat zu einer nie dagewesenen Menge an frei verfügbaren Web Daten geführt. LinkedUp wird die Anwendung von Open Data insbesondere im Bereich der Bildung vorantreiben. Dies wird durch eine Reihe von Aktivitäten erreicht, die zum Beispiel die Kuration und Katalogisierung von Daten oder die Evaluierung von innovativen Anwendungen im Rahmen eines offenen Wettbewerbs-Framework beinhalten.

Project duration:
01.11.2012 - 01.11.2014
