The regional government of Lower Saxony has formulated their guidelines “digital.niedersachsen - shaping the digital change for our state”, which is a framework for their initiatives on the digital transformation.

These guidelines are intended to help the state to develop the future areas of digital infrastructure, digital innovation and digital participation. They form a framework for the planned actions of all ministries. They are intended to cover almost every area of everyday life - from education to the digitization of the authorities.

The topics should not remain theoretical, but should be processed and implemented in practice. To stay as close as possible to the real needs and challenges, social and professional groups as well as municipalities are involved.
