Mobility is facing a wide variety of challenges while undergoing significant paradigm shifts at present. "MOBILISE – Mobility in Engineering and Science" is a joint initiative of the Technical University Braunschweig and the Leibniz University Hannover, aimed at driving highly interdisciplinary and excellent research to develop concepts for the mobility of the future. L3S is involved within its focus area "Digitalisation" and, in particular, within the project „Mobiler Mensch“ which is concerned with autonomous driving, intermodality, intelligent and networked mobility and automotive security, while considering requirements of actual mobility users and stakeholders.

**Project duration:**
2017 - 2021

**Bibsonomy show project publications:**
1

**Bibsonomy use tabs to list publications:**
1

**Members:**
dietze
tempelmeier

**Research Area:**
Intelligent Access to Information

**Status of the Project:**
