The group, Intelligent Access to Information or IAI, represents the largest and core part of the L3S Research Center, and focuses on all aspects of information access on the Web. The group's competence for more intelligence web access to information is realized by a team of individuals whose expertise range for: information retrieval, semantic web, databases, social networks to data mining. The breadth and depth of topics covered is impressive, and target core questions relevant for L3S Web Science focus (specifically the areas Web Information Management, Web Search, Web of People and Foundations of Web Science). The research results achieved by this team are included in many Rank-1 publications and in excellent conferences and journals.
