VDE-Studienpreis for excellent B.Sc-Theses

Christopher Reinders wrote his bachelor thesis within the BMBF "Errorless-Learning" project. His thesis deals with automatically recognizing handwritten letters

Mr. Reinders implemented an iOS application for tablet-based computers that is able to provide a better progress for children while learning handwritten letters. In comparison to state-of-the-art systems, it is possible to recognize letters at the beginning of writing. Thus, children get immediately feedback of their writing style and are assisted in their personal learning progress. The VDE appreciated his work as excellent and outstanding and awarded his thesis with the VDE Studienpreis.

Congratulation to Christopher Reinders!
